FLINT SCATTER (Upper Palaeolithic to Late Bronze Age - 40000 BC to 801 BC)

Evidence FIND

Description and Sources

Description

40872

Worked flint found over a wide area to the east and south east of Gorse Farm, below the 300' contour. The finds included a flint knife and an end scraper. [This record incorporates former PRNs 43519 and 43517]. {1}{2}

Four blades, some blades/flakes and three microliths are recorded at TF 308 735 in the Colonisation of Britain Project. They are in the Lincoln Museum. {3}

St Andrew's Church has some architectural features surviving from the fourteenth century.

Monument Types and Dates

CHURCH (Medieval to Modern - 1300 AD to 2050 AD)

Evidence EXTANT BUILDING

Description and Sources

Description

The site of a medieval church, Fulletby. The current church of St Andrews was built in greenstone and retains a partially restored 14th century sedilia. It also has two seats, leafy arches and is crowned by fine finials. Medieval figures look out from the capitals. There is a Jacobean chair, richly carved in the chancel. {1}{2}

St Andrew's Church has some architectural features surviving from the fourteenth century and was rebuilt in 1857 by Maughan and Fowler. For the full description and the legal address of this listed building please refer to the appropriate List of Buildings of Special Architectural or Historic Interest. {3}

HER Number	Site Name	Record Type
MLI81838	Hoe Hill in Fulletby	Monument

A natural hill in Fulletby that may have some evidence of human activity on the top.

Monument Types and Dates

NATURAL FEATURE (Undated)

Evidence ENHANCED NATURAL FEATURE

Description and Sources

Description

44030

Concerning Hoe Hill and the geology of the area. The geology mapping of the hill (Horncastle Sheet 115) shows it to be a natural feature. The hill forms a ridge, almost detached from the main outcrops to the west, of Lower Cretaceous rocks protruding eastwards into the Lymn Valley. It is one of several such geological outliers in the area which, although not quite as high, show up clearly on the geological map e.g. Mount Pleasant 3470; unnamed hill at TF375642; Thornbury Hill at TF352698 Gravel Pit Hill 3669.

The top of Hoe Hill is capped by a hard, brown ferruginous limestone known by geologists as the Carstone not Chalk, which is of Upper Cretaceous age. This hard protective capping has preserved the hill shape as the River Lymn has eroded its way down through the succession. Below this capping the main slope of the hill is formed of softer mudstones and clays of the Tealby Formation. The base of the hill is formed of Claxby Ironstone. Below this hard basal unit is the Spilsby Sandstone Formation which is exposed over much of the Lymn Valley sides and is hidden beneath alluvial sediments in the valley bottom and tributary valleys.

Although Hoe Hill is natural there is, of course, no reason why the hard Carstone capping could not have been adapted by human activity nor that further sculpting by local people of the relatively soft, underlying Tealby rocks could not have taken place. {1}

Evidence SUB SURFACE DEPOSIT

Evidence STRATIFIED FIND

Description and Sources

Description

Earthwork remains of medieval settlement, including possible tofts and crofts, were identified in and around the present village on aerial photographs by the National Mapping Programme. See notes. {1}

A watching brief was undertaken during groundworks at Chapel Lane, Fulletby (TF 2973 7343) prior to development. Two areas of pits were uncovered. In the southern area of the site there were rubbish pits dating to the late 12th to 16th centuries. These all contained a variety of animal bone and pottery sherds, implying that they were of domestic use. In the northern part of the site, there were two pits which were dated to the late 12th to early 13th centuries which contained industrial waste from smelting and smithing. This appears that the industrial practices were being undertaken away from the domestic area. {2}{3}

A watching brief during the laying of electricity cables recorded post-medieval pottery and field drains along the High Street and Winn Lane. A small section of wall was found at High Beeches, TF2982 7329, although thought to be part of a mud and stud cottage that was demolished in the 20th century there is no evidence to support this. {4}{5}

HOUSE (Post Medieval to Modern - 1733 AD to 2050 AD)

Evidence EXTANT BUILDING

Description and Sources

Description

PRN 48114

Mid 18th century mud and stud cottage, now faced with red brick and some weatherboarding. The roof is thatched, covered with pantiles. For the full description and the legal address of this listed building please refer to the appropriate List of Buildings of Special Architectural or Historic Interest. {1}

During a storm in 2007 the roof was blown off the house and it has subsequently deteriorated further, exposing construction details which were recorded prior to its reconstruction. It had a chimney at the east end, rather than a central chimney which is more usual in mud and stud cottages. There was evidence of numerous alterations, and a small lean-to extension had been added. {2}{3}

Description and Sources

Description

Former rectory to the north-west of Fulletby, thought to date from the 19th century. The building is thought to have been converted into a private residence in about 1960. Photographs taken of the building in the early and mid 20th century show the building to be of two storeys, with pitched slate roofs and featuring several large, brick chimney stacks at the various gable ends. The building looks to have been constructed of ashlar stone, although is now largely obscured by render. The building is thought to have been a replacement for an earlier rectory located in Fulletby, which is believed to have burnt down. The building originally featured a decorative doorknocker on the front door, made of cast iron in the shape of a lion's head, and thought to date from c.1800-1830. This doorknocker was replaced with a new knocker during a phase of repair works to the building, but was separately retained by the owners as a rare survival. The doorknocker was very large, measuring 255mm overall, with the head being 175mm long by 145mm wide. It has been suggested that the maker of the knocker was Archibald Kenrick & Sons of West Bromwich, although this is not conclusively known. {1}

SCHOOL (Post Medieval to Mid 20th Century - 1849 AD to 1960 AD?)

1849 AD - 1960 AD

Evidence DOCUMENTARY EVIDENCE

Description and Sources

Description

Former school. Two storey brick building, possibly built in two phases. Half buff brick in English Garden Wall Bond, half red brick in Flemish Bond, under a pitched gabled roof of slate. At least one original window opening has been infilled. There are decorative bargeboards on the gables of the southeastern wing. A modern sunroom extension has been added to the south elevation. {1}

White's 1856 Trade Directory states that the parish school was built in 1849. {2}

In 1957 the decision was made to close the school, though this decision faced opposition from the school's managers, the locals, and the MP for Horncastle. It is unclear when the school closed. {3}{4}
