|--------------------------------|--|-----------------------------------|---|------------------------------|-----------------------------|-------------------------------------|
| Summary of Proposed Work       | <p>T1 - Willow - To be removed to ground level as it is dead. T2 - Cypress - T3 - To be removed to ground level due to the fact that the driveway has an overbearing coniferous presence and the client would like to have more light into the property along with better access to the drive. Also by removing these trees, T25 (Holly Tree) would allow to become a mature tree. This is important to the client as the property is called Holly Cottage. T3 - Cypress T4 - Ash - Reduce by 2-3m. With the plan of removing surrounding coniferous trees, we feel that this specimen would benefit from a slight reduction due to the fact that it will be suddenly exposed to the elements which it has never had to cope with in the past. T5 - Conifer - T10 - Remove to ground level as this group of trees are extremely overbearing to the entire property. They also are rooted on a bank next to a river or dyke with number a of specimens already leaning away from the group. Both groups of conifers are directly above high priority targets such as parked cars, well used drive and garden and potentially the property. T6 - Conifer T7 - Conifer T8 - Conifer T9 - Conifer T10 - Conifer T11 - Willow - (approx 17m) - Tree has been pollarded a number of times in the past. Re-pollard to approx 7.5m. T12 - Conifer - T20 (approx 23m) - Reduce by 50% to be able to reestablish as a manageable hedge and to prevent future breakouts. T13 - Conifer T14 - Conifer T15 - Conifer T16 - Conifer T17 - Conifer T18 - Conifer T19 - Conifer T20 - Conifer T21 - Field Maple - (approx 16m) - Reduce the canopy by 3m to allow more light to the surrounding borders. T22 - Cedar - Lift lower branches by approximately 2m to allow clean access under trees. T23 - Blue Cedar - Lift lower branches by approximately 2m to allow clean access under trees. T24 - Beech - Lift lower branches by approximately 2m to allow clean access under trees. T25 - Holly - (approx 7m) - Reduce height 1.5m to help stabilise the specimen as it will be a stand alone tree as potentially T2, T3 will be removed. T26 - Yew - (approx 16m) - Reduce by approximately 8m in height and kill Ivy at base. The applicant would like to make this tree the centrepiece of the front driveway. By reducing the tree by a significant amount and shaping accordingly it would allow it to be regularly maintained in the future. T27 - Holly - Remove to ground level therefore allowing the Yew Tree to mature and establish itself as the centrepiece of the driveway. The Holly also stands extremely close to the property.</p> |                                   |   |                              |                             |                                     |
